This is the first office action for application number 10/826,609, Precise Position Controlled Actuating Method and System, filed on April 16, 2004.

Election/Restrictions

- I. Restriction to one of the following inventions is required under 35 U.S.C. 121:
 - I. Claims 1-4, drawn to a system and method for actuating a spray pump assembly, classified in class 700, subclass 283.
 - II. Claims 5-24, drawn to spray pump holders, classified in class 248, subclass 74.1.

The inventions are distinct, each from the other because of the following reasons:

Inventions I and II are related as combination and subcombination. Inventions in this relationship are distinct if it can be shown that (1) the combination as claimed does not require the particulars of the subcombination as claimed for patentability, and (2) that the subcombination has utility by itself or in other combinations (MPEP § 806.05(c)). In the instant case, the combination as claimed does not require the particulars of the subcombination as claimed because the controller for actuating the spray pump does not require the structure of a pump holder. The subcombination has separate utility such as a pump holder for any sprayer.

Because these inventions are distinct for the reasons given above and have acquired a separate status in the art as shown by their different classification, restriction for examination purposes as indicated is proper.

During a telephone conversation with Timothy J. Meagher on May 10, 2005 a provisional election was made without traverse to prosecute the invention of Group II, claims 5-24.

Affirmation of this election must be made by applicant in replying to this Office action. Claims

Art Unit: 3632

1-4 are withdrawn from further consideration by the examiner, 37 CFR 1.142(b), as being drawn to a non-elected invention.

Further, this application contains claims directed to the following patentably distinct species of the claimed invention:

Species I: The spray pump holder of figures 4A and 4B;

Species II: The spray pump holder of figures 5A, 5B, 6A, 6B and 6C

Species III: The spray pump holder of figures 7B and 7C.

Applicant is required under 35 U.S.C. 121 to elect a single disclosed species for prosecution on the merits to which the claims shall be restricted if no generic claim is finally held to be allowable. Currently, no claim is generic.

Applicant is advised that a reply to this requirement must include an identification of the species that is elected consonant with this requirement, and a listing of all claims readable thereon, including any claims subsequently added. An argument that a claim is allowable or that all claims are generic is considered nonresponsive unless accompanied by an election.

Upon the allowance of a generic claim, applicant will be entitled to consideration of claims to additional species which are written in dependent form or otherwise include all the limitations of an allowed generic claim as provided by 37 CFR 1.141. If claims are added after the election, applicant must indicate which are readable upon the elected species. MPEP § 809.02(a).

Should applicant traverse on the ground that the species are not patentably distinct, applicant should submit evidence or identify such evidence now of record showing the species to be obvious variants or clearly admit on the record that this is the case. In either instance, if

Art Unit: 3632

the examiner finds one of the inventions unpatentable over the prior art, the evidence or admission may be used in a rejection under 35 U.S.C. 103(a) of the other invention.
